MARK FENLON

DR. SCOTT LINDGREN

MATSUBARA SAN

## ONE VISION. MULTIPLE PERSPECTIVES.

Tech Entrepreneur and audiophile Steve Cheng founded MarkAudio-SOTA with a dream team of designers, starting with driver innovator Mark Fenlon. Fenlon is well known in the custom-build and OEM markets for his wide-range designs. Custom versions of his drivers were fitted with the unique voice coils of the 35-year transducer veteran Matsubara San for MarkAudio-SOTA's speakers. These components were integrated into industry expert Dr. Scott Lindgren's technical box alignment and elegant crossover designs, and then built into beautifully styled cabinets. Working seamlessly together from different parts of the world, MarkAudio-SOTA's dream team has created truly unique and authentic High-Fidelity loudspeakers.

### ALL-RANGE DRIVERS

*MarkAudio-SOTA speakers offer the rich midrange that is typical of a wide-range single speaker design, while providing a full frequency range extending from 40Hz to 25kHz thanks to the all-range drivers.*

### SYMMETRICAL SOUND FIELD

*Wide dispersion, shallow-profile cone drivers replace conventional cone-woofer and dome-tweeter combinations. With their matched dispersion and output characteristics, the two cone drivers provide a seamless integration between high and low frequencies, resulting in a smooth, natural output.*
